

Your Work Just Got Lighter.

BRAWN™ LIGHTLID™ TRANSLUCENT ROOF

BRAWN™ LIGHTLID™ Translucent Roof is the affordable alternative to your current steel roofing. It is more durable, proven by its use in thousands of semi-trailers and truck bodies for decades.

DURABLE

- Impact & Puncture Resistant
- 5 Year Warranty from purchase
- Advanced strength & durability characteristics
- Moisture and solvent resistant
- Impressive fastener retention
- Resistant to rot, corrosion & mildew
- Not affected by cleaning chemicals
- Expansion/Contraction similar to Aluminum

EASY TO HANDLE & INSTALL

- Installs the same as current process
- Easy to repair & clean
- 100 feet long rolls available in 72", 84", 88", 100" and 102" widths
- Roof tape available in 1-1/4", 4" and 6" widths

PERFORMANCE ADVANTAGES

BRAWN™ LIGHTLID™ is a multi-layered thermoplastic laminate comprised of polypropylene resin reinforced with continuous bi-directional glass fiber. It resists rot, corrosion and mildew, and is not affected by cleaning-related chemicals. BRAWN™ LIGHTLID™ panels provide significant energy absorption over traditional FRP and steel materials, and exhibit thermal expansion/contraction values similar to aluminum. The bi-directional nature of BRAWN™ LIGHTLID™ provides consistent physical properties throughout the entire panel. It is easily repaired by applying low heat. Standard roofing coils are available in several different widths.

BRAWN™ LIGHTLID™ is the solution to your cargo roofing needs. Its puncture resistant properties combined with the ability to offer a translucent roof with a lower cost is a game changer for the industry.

BRAWN™ LIGHTLID™ is tested and certified to perform over an aging life of 35,000 hours without any impact on top layer, substrate and overall integrity. It lets in bright, natural light up-to 400 LUX, equivalent to brightness in an office. It has also undergone QUV Accelerated Weathering Test for resistance to rain, sunlight, dew & UV light and ASTM D790 test for bending and stiffness.

CHOOSE BRAWN™ LIGHTLID™

In addition to its strength characteristics, its translucent properties will allow light into your trailers for a safer environment with pricing comparable to steel. It also reduces the risk of injury during installation versus your standard metal roof.
